EDUCATION

SELF-TAUGHT FULL STACK DEVELOPER

Online Courses: W3Schools

2020 – Present

MICRO1 CERTIFICATION

Advanced JavaScript & Modern Frontend Frameworks (React, Vue, Angular)

SKILLS

LANGUAGES & FRAMEWORKS

HTML, CSS, SASS, JavaScript, TypeScript, React, Node.js, Express.js

DATA & INTEGRATIONS

MongoDB, REST APIs, Google Calendar API (OAuth2), Airtable, Resend

STYLING & UI

Tailwind CSS, Bootstrap, Responsive Design, UI/UX Integration (Figma)

TOOLS & CONCEPTS

Git, GitHub, API Integration, Component Architecture, CORS & Security, Vercel, Render, Debugging, Problem Solving, Team Collaboration

SUMMARY

Frontend Developer skilled in HTML, CSS, JavaScript, React and TypeScript, with strong experience building responsive, component-based web applications and integrating REST APIs. Also comfortable working across the full stack (Node.js, Express, MongoDB) when a project calls for it. Proven ability to translate Figma designs into clean, maintainable, user-friendly interfaces. Open to remote and collaborative opportunities.

PROJECTS & EXPERIENCE

FULL STACK DEVELOPER (CONTRACT) — JOGOS PARTNERS & ADVISORY LP (JOPAD ADVISORY) | 2026

Designed and built a full-stack advisory booking platform (Node.js, Express, MongoDB) from scratch, handling real-time scheduling, server-side conflict detection, and a multi-step booking wizard with persisted client-side state.

Integrated Google Calendar API (OAuth2) to auto-generate Google Meet links and sync calendar invites for every booking, eliminating manual scheduling coordination.

Built automated transactional email workflows (Resend) with branded HTML templates and dual client/admin notification pipelines for bookings and lead intake.

Developed a CMS-style content system for the firm's regulatory advisory articles — MongoDB schema, REST API, and a dynamic frontend with live search, category filtering, and a responsive auto-rotating carousel.

Implemented a lead intake pipeline with honeypot spam protection, dual-write persistence to MongoDB and Airtable for redundancy, and GA4 conversion tracking.

Configured secure CORS policies, environment-based secrets management, and RESTful API architecture across the application.

Deployed and maintained production infrastructure across Vercel (frontend) and Render (backend); managed SEO and analytics setup including GA4, sitemap correction, and Search Console configuration.

FRONT-END MENTOR PROJECTS | 2020 – PRESENT

Built multiple production-ready UI projects including landing pages, multi-step forms, calculators, card layouts and API-powered applications.

Delivered pixel-perfect implementations based on Figma designs using HTML, CSS/SCSS, JavaScript and React.

Developed fully responsive layouts for mobile, tablet and desktop with attention to accessibility and clean code practices.

Integrated external APIs (e.g., Advice Generator) to handle dynamic data and real-world functionality.

JASON — MEDICAL FUNDRAISING CAMPAIGN SITE | CONTRACT PROJECT

Built a React/TypeScript fundraising site to support a child's corrective surgery campaign, focused on clear, accessible UI and secure handling of sensitive donor and beneficiary information.

Implemented a persisted state store (Zustand) to track and display real-time campaign progress — funds raised, donor count, and goal percentage.

Designed a privacy-gated modal flow requiring explicit user confirmation before revealing sensitive bank and contact details, protecting the beneficiary from misuse.

Built reusable, accessible UI components (animated accordion, modal system, progress bar) with Framer Motion for smooth, scroll-triggered animations throughout.

Implemented social sharing functionality (WhatsApp, Twitter/X, Facebook) with pre-formatted campaign messaging to maximize reach.

VORTEX HORIZON WEB AGENCY | PERSONAL PROJECT | 2022 – PRESENT

Founded and built a mini web studio focused on custom websites and 3D model showcases.

Developed complete front-end architecture, brand identity, interactive portfolio sections, project galleries and service pages.

Created reusable UI components, smooth navigation flows and client preview features for project demonstration.
